

# First Project Presentation

At this point, you should have a rough draft of your project and at least some small use cases running. During the class presentation you should

- Give a brief description of your project. What are you working on?
- Demo at least one use case.
- Show us your github, current module structure and point to some cool Haskell libraries you are using.
- Show us things you find interesting (if any), if time permits.

We need to fit the entire class and we don't have much time. Please practice not to exceed 6-7 minutes for your brief presentation. This presentation is worth 15% of the project grade.

Date and time: Friday, November 22 in class.

This is the order of presenters:

1. James, Zev and David
2. Isaih and Arnav
3. Carter and Ethan
4. James and Nicole
5. Nyx, Nori and Sam
6. James and August
7. Tim and Jack
8. Matti and Dyami
9. Aleksey and Christian
10. Chris and Kana
11. Sarah, Diya and Siew
12. Gunnar and Sam
13. Boning and Lianting
